

CEN-PE-CO ATOMIC POWERED DIESEL FUEL CATALYST

Cen-Pe-Co Atomic Powered is a concentrated diesel fuel additive designed primarily to prevent fuel gelling in severe cold weather. Although most competitive products make big claims, few lower the Cold Filter Plugging Point as much as Atomic Powered. It is also formulated to improve fuel economy and increase lubricity in today's ULSD fuels with the expertise that earned Central Petroleum two U.S. patents.

WINTER BENEFITS:

- Approximates a 40% kerosene blend
- Rated #1 at lowering Cold Filter Plugging Point
- No alcohol anti-ice agent

OTHER BENEFITS:

- Improves fuel efficiency
- Increases horsepower
- Reduces engine vibration and smoke
- Restores lubrication
- Inhibits discoloration, degradation, and resulting filter plugging deposits arising from storage or the heat of modern injection systems.

BLENDING:

Cen-Pe-Co Atomic Powered is recommended at 1 gallon per 1000 gallons of diesel fuel. For maximum anti-gel performance, Atomic Powered needs to be added before the fuel becomes cloudy from low temperatures. When severe cold is approaching (-10° F as a rule of thumb), double this treatment rate and/or add kerosene.
